

measuring up your new **custom-made ergoKids® chair** is...

easy peasy...

No two people are the same size and shape.
That's a part of what makes us unique.

Mummies aren't the same shape as Daddies
and big kids are... well, bigger than little ones.

At ErgoChair we know
that we all have different
needs, so we design and
make each and every one
of our kids' chairs to meet
individual and unique requirements.

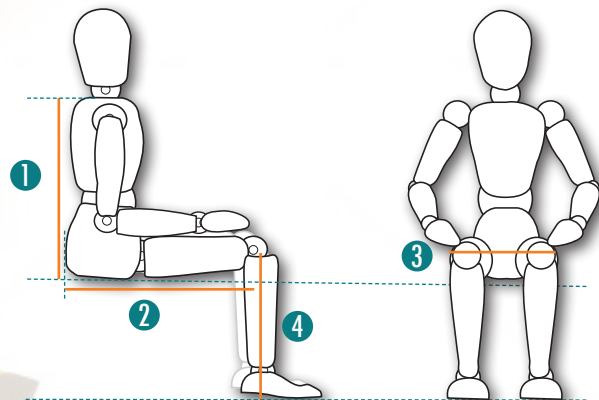

It's easy to create the right chair we just need the right prescription, see our quick guide overleaf

We'll need a few strategic measurements,
then we can specify the best possible solution*.

- ① Seat to shoulder
- ② Buttock to back of knee
- ③ Hip width
- ④ Knee to floor

* Additional dimensions may be required

You can have whatever you want... literally.

There are almost unlimited variations and options.

Although, that can be a bit overwhelming, so we usually recommend that you pick one of the two main back types and one of the two main seat types and then customise from there.

Blue = Essential

White = Optional

Choose a **Back**

Select either the Standard ErgoKids Back or the V-Trak version

or
of course you can just ask for a custom version to your specification

Choose **Air cell(s)**
