# AdaptLift® 2.0

## Introducing the latest evolution - AdaptLift 2.0

Building on from the success of our original AdaptLift, we have further enhanced the capabilities of the model with the AdaptLift 2.0.

It features lower starting points on the seat to cater for even more users with shorter lower leg dimensions. The AdaptLift continues to provide a lift/lower, tilt, recline and brake feature however it is now available with a rise, lower, brake and swivel model.

The introduction of the swivel on the seat pan allows the user to turn 180 degrees; 90 degrees left and 90 degrees right to provide as much movement as possible without a limitation of requiring to face forwards only.

The product is still designed to be specified in conjunction with our flagship Adapt 600 seats and backrests or with the Adapt V600 backrest. This results in the seat and backrest being able to be bespoke with numerous adaptations available.

### NEW ARM OPTION

The AdaptLift will be available with new rotating arms with an adjustable pad. This provides a 90 degrees backwards rotation to allow for easy transfers/access to the chair. The pad offers height, retractable and lateral adjustment. Also available with a pad that offers a twist function.

Available in a range of fabric options beyond our incredible standard offering. Including a post consumer waste fabric for those looking to attain the maximum environmental credentials possible.

### Specifications

Seat Height (Low to Max): 540mm - 750mm

Seat Forwards Tilt: 15 degrees

Seat Recline Tilt: 5 degrees

All the benefits utilising an Adapt 600 seat/back combination or a V600 backrest.
